Salmon in the classroom

Delivery of 100 salmon eggs

Our Preschool Salmon Project

We have salmon in our classroom, provided by Chief Joseph Hatchery and Colville Tribes Fish & Wildlife Department!

One hundred salmon eggs were delivered to the preschool in late December. The picture directly above shows the eggs beginning to mature. If you look closely, you can see the baby salmon's eye.

Students enjoy learning about the life cycle of salmon. Next month we will update you with more photos showing the growth of the salmon fry.

Making Snow for Science

Teacher Heidi and her students made “snow” as part of their science project using baking soda and hair conditioner, then students got to feel the snow they made.

Fun with Magna Tiles - While students play with these fun tiles they are also using problem solving and critical thinking skills. As students build their creations they are also developing their hand-eye coordination and fine motor skills which they will need in Kindergarten.

Pattern blocks introduce students to geometry. Luis Joel is increasing his visual spatial skills as he creates beautiful patterns.

As Francisco and Alfredo play with blocks they are improving their language and communication skills. Students are using spatial reasoning and problem solving skills as well...as they try to keep their structure upright.

Washington State Department of Early Learning

Serving our Community's Children

The Omak Early Childhood Programs serve children ages three to five years old and their families. As educators, we create and use developmentally appropriate classroom environments and curriculum so that every child is provided optimal socio-emotional health, kindergarten readiness, and opportunity for a successful future. Together with family service providers, we work as partners with families to meet each child's needs.
